INTRODUCTORY

AN improvement of value to all interested in Metal Ceilings has been perfected and we announce that WHEELING METAL CEILINGS now have RE-PRESSED BEAD JOINTS AND DIE-CUT NAIL HOLES. In the following paragraphs the reasons for the change are given.

Unless the Lapping Beads are sufficiently prominent and each is an exact duplicate of the other, the edges of Metal Ceiling Plates cannot fit together perfectly and the erector will have difficulty in keeping the plates in line on the Furring Strips.

The metal plates are stamped between an iron die and a soft metal die. Theoretically, perfect-fitting beads are produced, and until the bead on the soft die becomes worn or flattened, the statement is true, but the soft metal beads are easily flattened unless the operator uses extreme care. When the least wear upon or flattening of the bead occurs there is a corresponding fault in the stamped sheets, and the ceiling erector has trouble.

When erecting plates on which some of the beads were flattened and some well rounded the mechanic found that they would not fit together as quickly and accurately as such a modern product should. He lost time and had to exercise much care to keep the plates running true and to insure a well-fitting, neat-looking, tight-jointed ceiling; in fact, an experienced man only could get the results desired and these only at a sacrifice in cost and time.

By long experience in the manufacture of Metal Ceilings we found, after deliberate and costly trials, that the "dot-and-dash" bead with nailing points every six inches could be erected at less cost and with better results than any other. We have been using this bead for several years and have devoted special attention to making it as perfect as possible. All press operators, however, are not careful, and it is not possible for the foreman to have all presses under his direct observation at all times; consequently, some of the beads would become flattened.

To insure perfect joints and to make it easier and more economical than ever to erect Wheeling Ceilings, WE ARE NOW RE-PRESSING THE BEADS ON DIES MADE FROM TOOL STEEL. These dies are as true to size and shape as it is possible for the finest tools and most expert machinists to make them.

Not only are the beads re-pressed, but AT EACH NAILING POINT THE METAL IS BLANKED OUT. This ELIMINATES THE DRIVING OF THE NAIL THROUGH THE METAL, making erection easier and quicker. The plates are re-trimmed on four sides, as has always been our custom.

These improvements will be appreciated by the SHEET METAL WORKER, because they enable him to do first-class ceiling work at a large saving of cost and annoyance; and by the ARCHITECT and OWNER, because they are a guarantee that the erected ceiling will be free from the fault (open joints) so common to the un-pressed and old-style beads.

METHOD OF DETERMINING APPROXIMATE QUANTITIES AND PRICES

THE unit of measure of metal ceilings is 100 square feet—called a "square."

To determine the approximate amount of material required for a room, add to the length and add to the width twice the distance the cornice is to finish down the walls and then include the lap of filler. For instance: If the room measures 20 x 40 feet and a cornice finishing 12 inches down the walls is to be used, it is necessary to add 24 inches to each dimension for the cornice and 6 inches should be added to each for lap of filler. The cornice extends 12 inches on all four sides of the room, making the ceiling measurements 24 inches longer and 24 inches wider than the actual room measurements; the 6 inches allowed for lap of filler is to take up any unevenness that may be in the walls or construction of the building. Example:

Size of room	20'-0" x	40'-0"
Add for 12" cornice	2'-0"	2'-0"
Lap of filler	0'-6"	0'-6"
	22'-6" x	42'-6" = 9.57 squares

This illustrates the fact that room measurements do not represent true metal ceiling measurements.

There should be no deduction for skylight or other opening unless the amount of material so displaced amounts to more than one square.

To determine the total approximate price of material, multiply the number of squares by the price per square of the design selected, using the price of the room nearest approaching in size the one on which you are figuring. If it is desired to use cornice mitres instead of cutting mitres on the job, the price of the total number of mitres to be used should be added. Example:

Number of squares	9.57
Price of design	$9.10 per square
Total price	$87.09
Add for 4 mitres at 60 cents	$2.40
Making grand total	$89.49

The above figures are based on a perfectly rectangular room measuring 20 x 40 feet, without any beams in the ceiling, any offsets, or any other irregularities affecting the quantity or price of material.

A beam 12 inches deep running the length of the room would add 2 feet more to the width and would make necessary four additional cornice mitres, the effect being that of two rooms 10 x 40, and necessitating the use of a correspondingly higher price per square. Additional beams would increase the quantity of material, number of cornice mitres and price per square.

While the above method of figuring will give reasonably accurate results it is always advisable, when possible, to send us a diagram or plan with measurements, so a layout of the ceiling may be prepared together with an exact bill and price of material.

The list prices in this catalogue are for plates, mouldings, etc., given one coat of white paint on both sides before shipping and include regular brackets for applying.

FURRING STRIPS ARE EXTRA AND WILL NOT BE SHIPPED UNLESS ORDERED

MONEY AND TIME SAVERS AND TROUBLE ELIMINATORS

Re-Pressed Bead Joints and Die-Cut Nail Holes

ARE FEATURES OF

Wheeling Metal Ceilings

THE beads are re-pressed on dies made from tool steel. These dies are as true to size and shape as it is possible for the finest tools and most expert machinists to make them. There is no variation in any direction.

Not only are the beads re-pressed, but at each nailing point the metal is blanked out. This eliminates the driving of the nail through two and sometimes four thicknesses of metal, making erection easier and quicker. The plates are re-trimmed on four sides.

These improvements enable the sheet metal worker to do first-class ceiling work at a large saving of cost and annoyance; and to the architect and owner they are a guarantee that the erected ceiling will be free from open joints, the fault so common to the unpressed and old-style beads.

A saving of at least 25 per cent. in the cost of erection will be effected if ceiling plates with

Re-Pressed Bead Joints and Die-Cut Nail Holes are Used

Wheeling Metal Ceilings, made by Wheeling Corrugating Company, have these money-saving features.

Get a set of samples and test them—a postal card request will be the whole cost. You will find the samples true on all sides, perfect fitting and in true alignment, and that the nail holes register perfectly at every test.

In erecting Wheeling Ceilings, the patterns cannot get out of line, no nails have to be driven through the metal and the job is done better and in much less time.

DIAGRAMS AND WORKING PLANS

WORKING plans, showing the arrangement of material shipped, are furnished in all cases where diagrams and measurements of the rooms to be ceiled are given us, and detailed drawings showing the method of applying are made. If a diagram of the room to be ceiled is furnished, with the distances from point to point, and the size and shape of all offsets, openings and irregularities indicated, we will be able to make more intelligent estimates, and if desired submit, free of charge, a design for the approval of the customer.

In all cases inform us of the height of the room and the distance from the window and door casings to the ceiling, so that a cornice of suitable depth may be selected.

The diagrams on the next two pages indicate the measurements and information we should have to enable us to make intelligent estimates and to avoid shortages and errors in shipments.

More satisfactory results will be obtained if some choice of design is indicated when inquiry is made. However, if customer expresses no preference, we will prepare an artistic arrangement of plates suitable for the shape of the room and the purpose for which it is to be used.

When desired, we will furnish experienced men to erect the material, charging for their time, transportation and board.

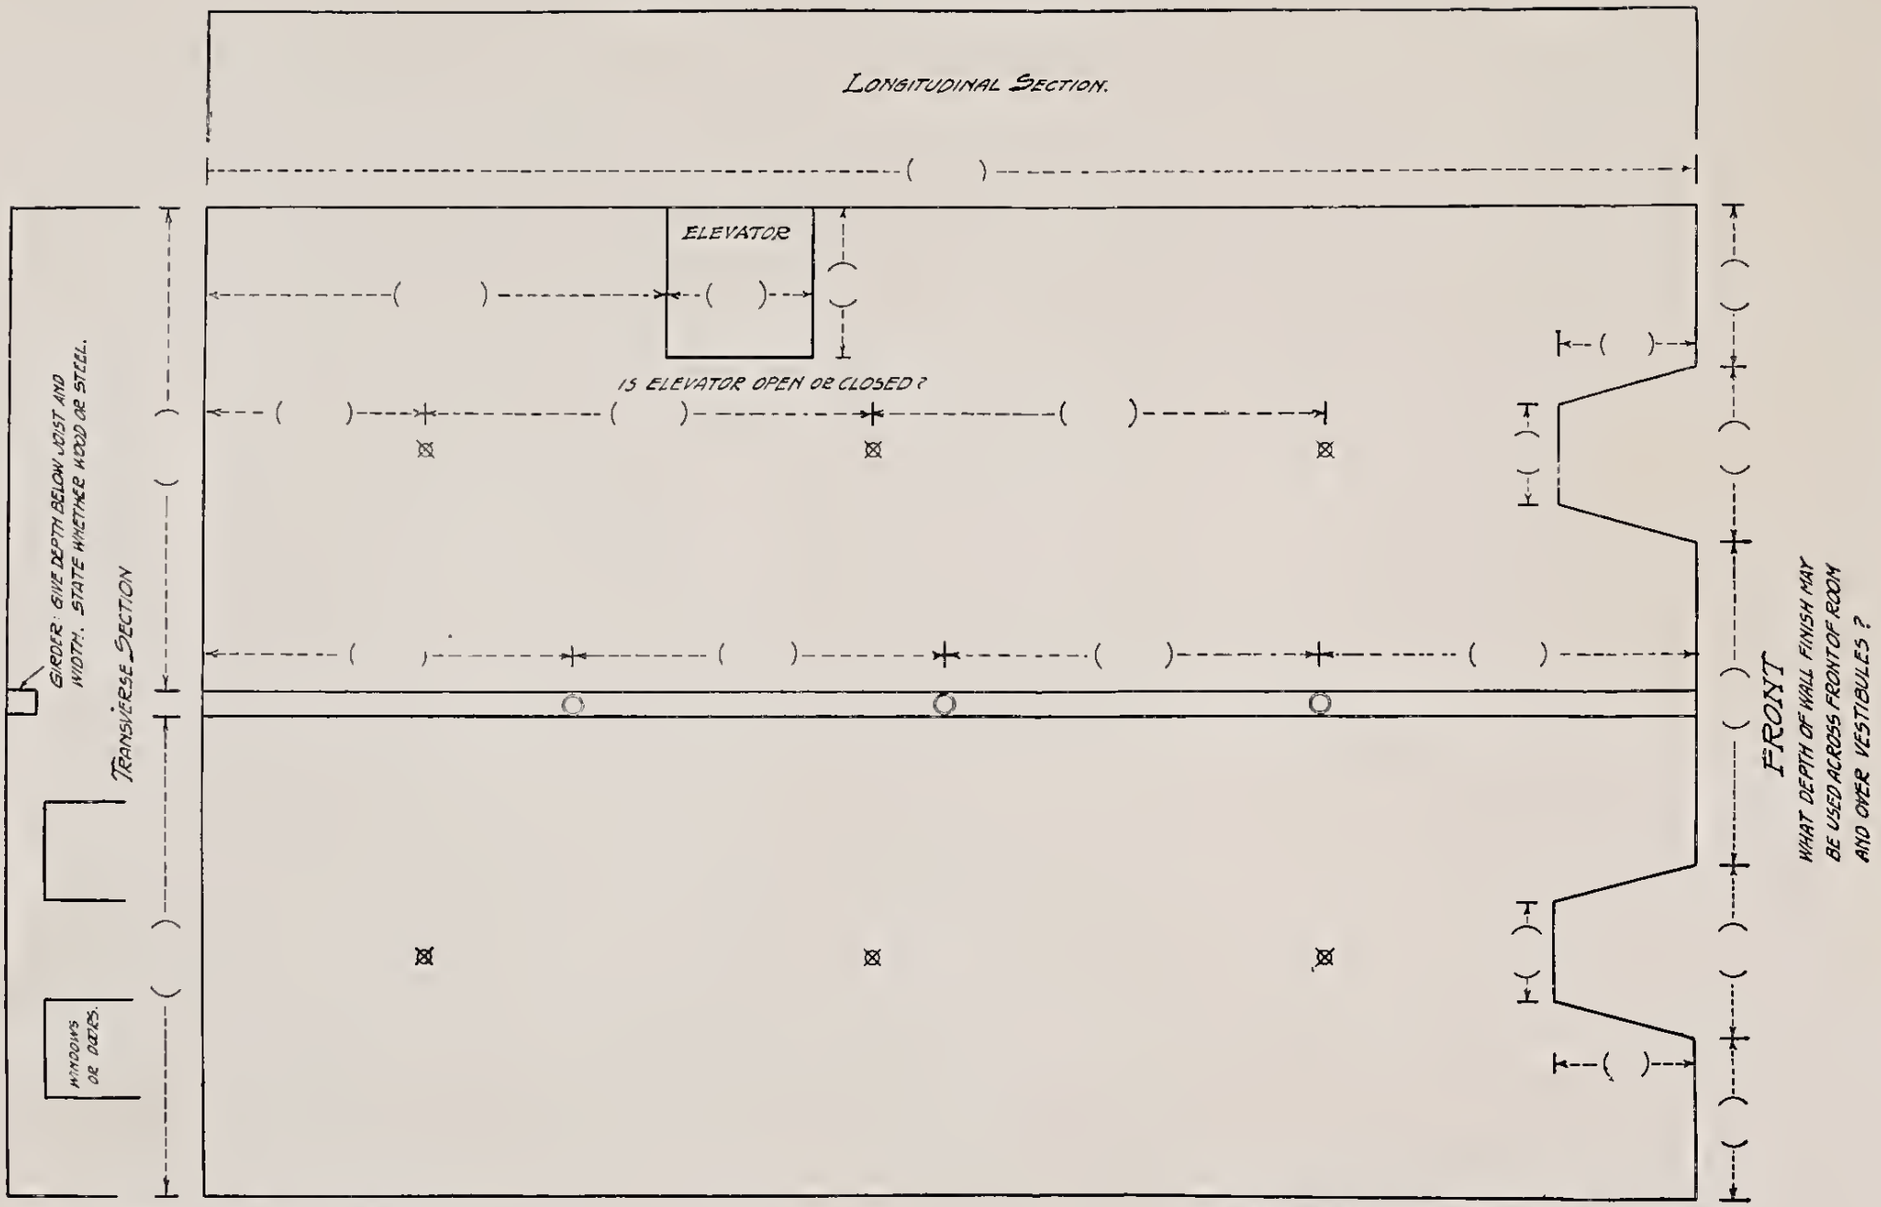
MEASUREMENT DIAGRAM



FOR WHAT PURPOSE IS THE ROOM TO BE USED?_____
IS IT NEW, OLD OR REMODELED BUILDING?_____
ARE THE CEILINGS AND WALLS PLASTERED?_____
WHAT DEPTH OF CORNICE OR WALL FINISH MAY BE USED?_____
WHAT IS HEIGHT OF STORY FROM CEILING TO FLOOR?_____
IF CENTERS ARE DESIRED, GIVE NUMBER AND LOCATION._____
GIVE SELECTION OR PREFERENCE OF DESIGN WANTED_____
MAKE DIAGRAM AND GIVE MEASUREMENTS AS INDICATED ON THIS ONE._____

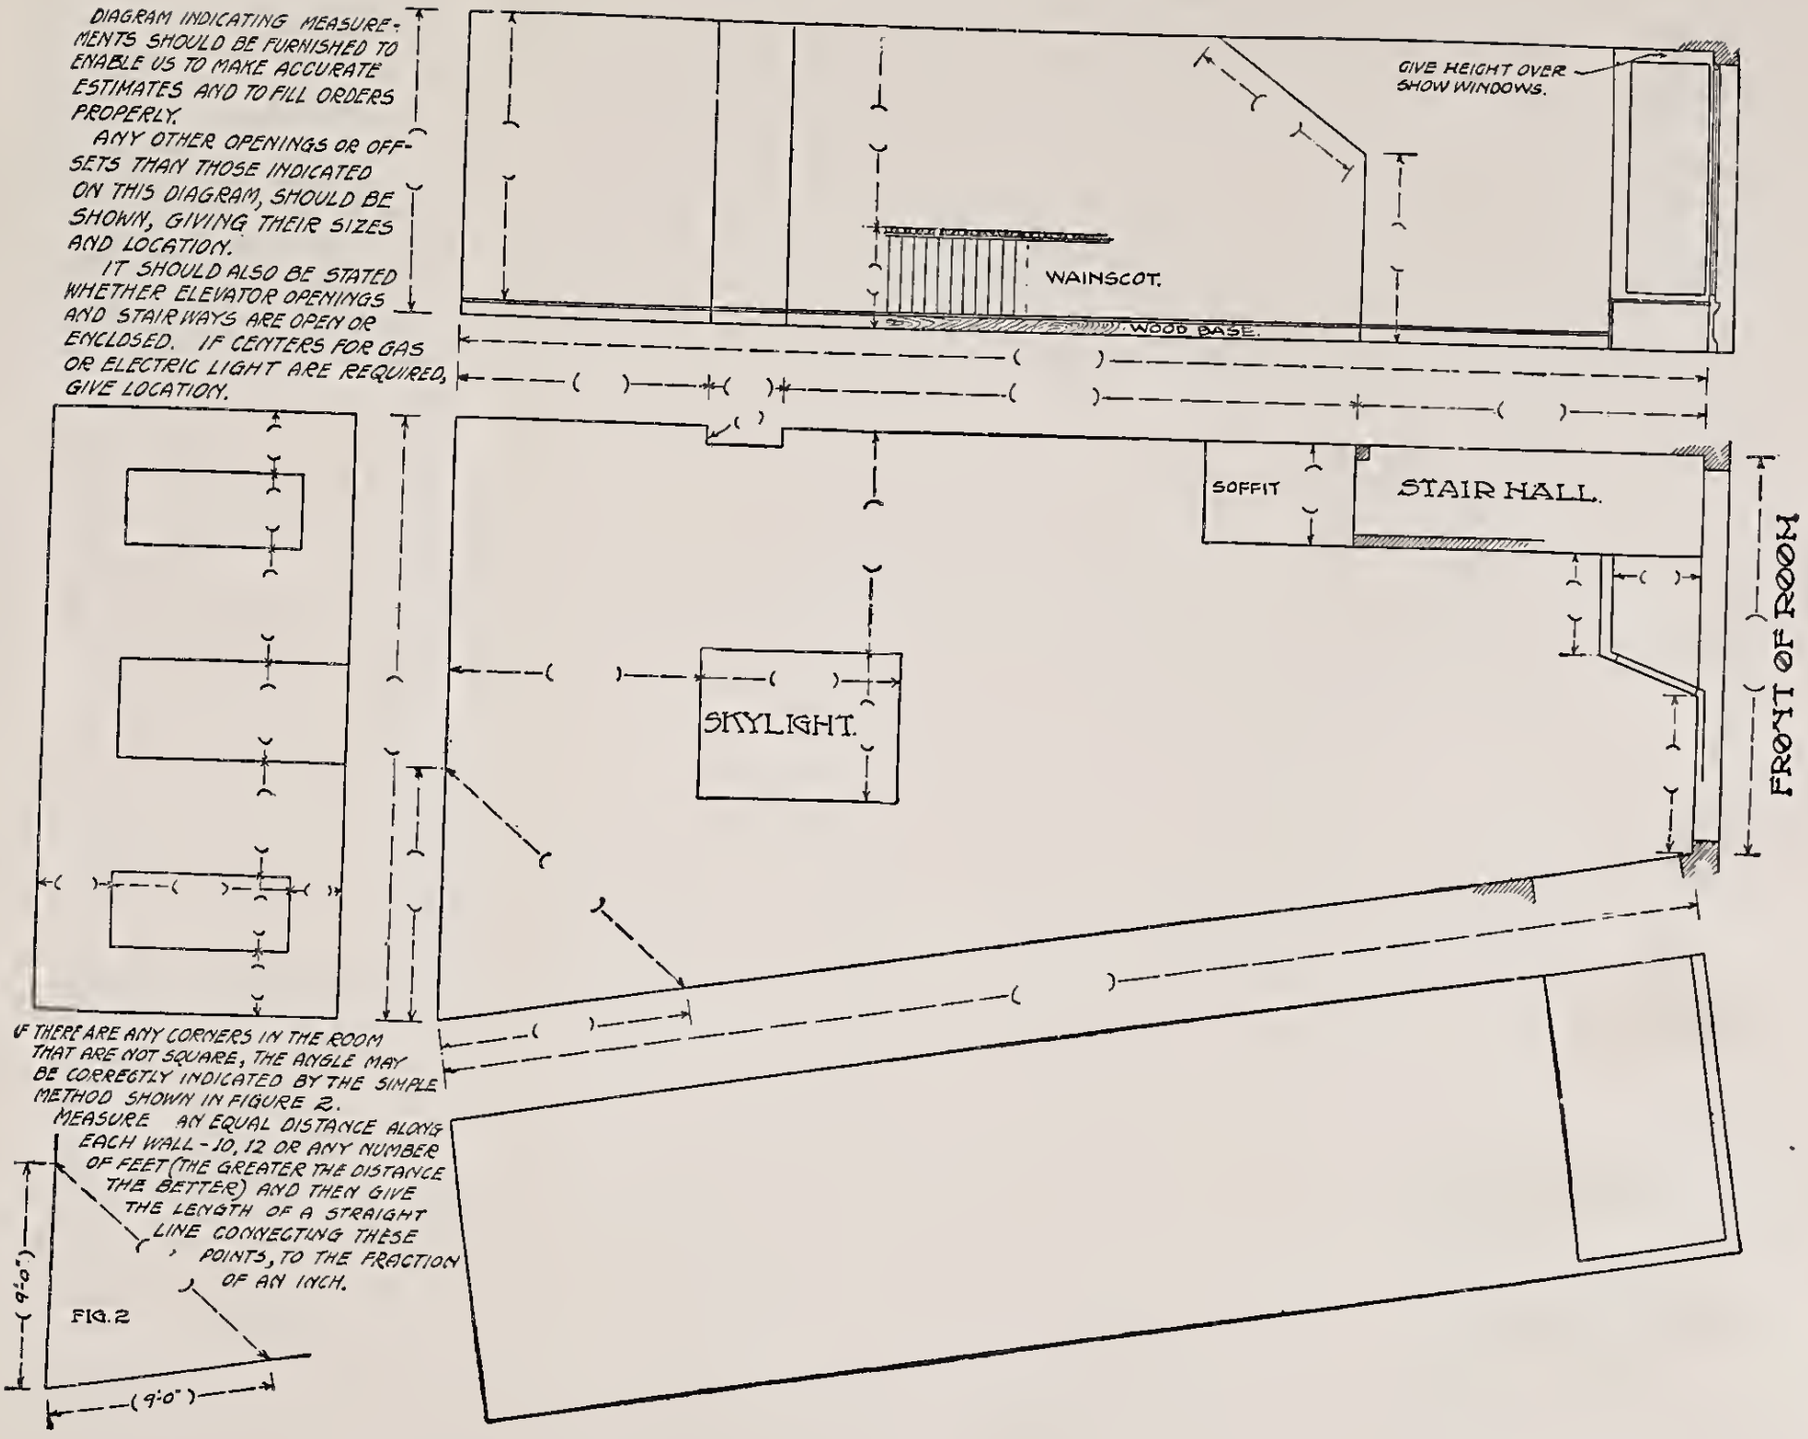
IT IS NOT ADVISABLE TO CEIL EXPOSED PLACES, SUCH AS VESTIBULES, BALCONIES AND PORCHES, WITH METAL CEILINGS, UNLESS THE SPACES ARE FIRST SHEATHED SOLID WITH BOARDS AND COVERED WITH BUILDING PAPER, TO PREVENT THE METAL FROM SWEATING.—THIS IS CAUSED BY THE UNEQUAL TEMPERATURE OF THE ENCLOSED AIR, ABOVE CEILING AND THE OUT SIDE AIR.

MEASUREMENT DIAGRAM

DIAGRAM INDICATING MEASUREMENTS SHOULD BE FURNISHED TO ENABLE US TO MAKE ACCURATE ESTIMATES AND TO FILL ORDERS PROPERLY.

ANY OTHER OPENINGS OR OFFSETS THAN THOSE INDICATED ON THIS DIAGRAM, SHOULD BE SHOWN, GIVING THEIR SIZES AND LOCATION.

IT SHOULD ALSO BE STATED WHETHER ELEVATOR OPENINGS AND STAIRWAYS ARE OPEN OR ENCLOSED. IF CENTERS FOR GAS OR ELECTRIC LIGHT ARE REQUIRED, GIVE LOCATION.



IF THERE ARE ANY CORNERS IN THE ROOM THAT ARE NOT SQUARE, THE ANGLE MAY BE CORRECTLY INDICATED BY THE SIMPLE METHOD SHOWN IN FIGURE 2.

MEASURE AN EQUAL DISTANCE ALONG EACH WALL - 10, 12 OR ANY NUMBER OF FEET (THE GREATER THE DISTANCE THE BETTER) AND THEN GIVE THE LENGTH OF A STRAIGHT LINE CONNECTING THESE POINTS, TO THE FRACTION OF AN INCH.

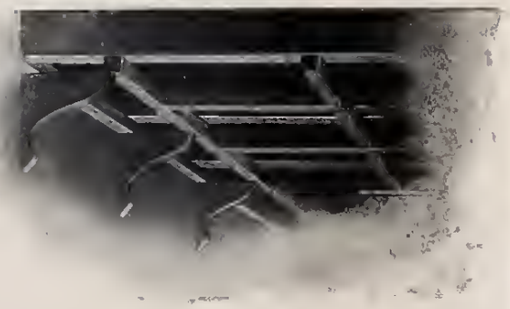
FIG. 2

INSTRUCTIONS FOR APPLYING

FURRING FOR FLAT PLATES AND SHALLOW PANELS

STRIKE chalk lines the length of the room at distances indicated on the working drawing so they will coincide with the center lines of the nailing beads on the plates. On these lines, nail $\frac{7}{8}$ x $1\frac{1}{4}$-inch furring strips. Between these strips and across the room, nail "headers" or cross strips at distances from center to center equal to the distances between centers of the nailing beads of the plates as indicated on the working drawing. Nail strips in angle of ceiling and wall and at a distance from the wall equal to the projection of the cornice to receive the cornice brackets. Bring the strips to a uniform depth by driving wedges between the strips and the old ceiling or joists, otherwise the ceiling will present an uneven appearance when completed.

Flat plates and raised panels may be applied to wood sheathing, in which case no furring strips will be required, but the sheathing should be level.



SINGLE FURRING

FURRING FOR DEEP PANELS

Nail furring strips the length of the room, as for flat plates, carefully leveling them with wedges. Then nail other strips at right angles on top of these, at distances from center to center equal to the distances between centers of the nailing beads of the panels, as shown on the working drawing. Nail "headers" or cross strips at right angles to the last strips and on top of the first strips applied. This will bring all strips to the same level. To bring the cornice to the level of the ceiling nail one strip on top of another in the angle between the ceiling and the wall, and at distance from the wall equal to the projection of the cornice.

APPLYING CEILING

Apply the different members of the ceiling in the following order: Field, Filler, Mold or Border, Cornice.

Beginning at one corner apply the ceiling plates across and along the room, keeping the lapping edges running from the light. Each piece should be carefully lapped so the beads will be straight and true. The plates should be nailed at six-inch intervals with one-inch wire nails, with small heads. The filler plate is lapped under the members on either side of it.

When stamped cornice mitres are used they should be fitted into the corners of the room before applying the cornice.

Close or "swedge" with a small dull tool any joints which may not have lapped tightly, owing to the lapping beads having been bent or flattened in applying.

DOUBLE OR CROSS FURRING

PAINTING METAL CEILING

All of our ceiling material is provided with a priming coat of paint on both sides. After the material is erected it should have two coats of good paint on the face. In order to get the best effect and properly distribute the light over the rooms, a gloss paint should not be used. Gloss paint becomes soiled and shows wear just as quickly as a paint that is flat or without gloss.

We recommend a very simple treatment, because the embossed ornaments on our metal ceilings are sufficiently decorative without elaborate painting. The best effect is produced by using white paint or a paint slightly tinted to harmonize with the general color scheme of the room. On the cornice can be used a darker tint to blend with the ceiling and other decorations in the room.

The following method is a good one: Dust or clean off any dirt or grease spots from the metal; mix the first coat of strictly pure white lead, using equal parts of raw linseed oil and turpentine; tint the same color you desire to finish with. When first coat is dry go over with a mixture of strictly pure white lead thinned to the desired consistency with pure turpentine; tint the same as first coat.

TERMS: On Sales of Material—Thirty days net cash, or two per cent. discount from net amount of bill for payments made within ten days from date of invoice. No discount allowed after ten days.

On Contracts—Net cash on completion of the work.

Bills not paid at maturity are subject to sight draft with exchange and cost of collection without further notice.

Orders from patrons about whom we have no satisfactory information, and who do not send references, will be shipped to our order; and draft, with bill of lading attached, will be sent to the customer's local bank for collection.

Delays will be avoided if references are furnished when inquiry is made.

Claims for errors should be made upon receipt of goods. All shipments should be checked upon arrival and errors reported immediately.

If goods are shipped according to order they must not be returned without our consent. If shipment is damaged in being returned, credit will not be allowed to a greater amount than its value when received by us.

An invoice and bill of lading should be forwarded when goods are returned.
